This memo is to inform you that the compounds listed below were not able to be validated by USDA's Pesticide Data Program (PDP) and were not analyzed in olives during the timeframe of October 2016 through September 2018. These compounds have established U.S. tolerances for olives but did not recover through the QuEChERS Multiresidue Method (MRM) employed by the California Department of Food and Agriculture laboratory, which was assigned to test olives for PDP during this time period.
